Date of Assignment: 26/09/2026	Date/Time of Submission: 26/09/2026

Practical 11: Jira Automation

Introduction

Jira Automation performs actions automatically when a specified event or condition occurs.

Important Definitions

- **Trigger:** Starts the automation rule.
- **Condition:** Checks whether a requirement is satisfied.
- **Action:** Performs an automatic operation.
- **Automation Rule:** A combination of trigger, condition, and action.

11-A and B: Create an Automation Rule

Objective

To create an automation rule using **Trigger** → **Condition** → **Action**.

Steps

1. Open the **ScrumOrbit** project.

The screenshot shows the Jira TeamOrbit interface. On the left, there is a sidebar with navigation options like 'For you', 'Recent', 'Starred', 'Apps', 'Plans', 'Spaces', and 'Assets'. The main area displays a list of work items under the 'TeamOrbit' space. A modal window titled 'Automation' is open, showing a diagram of a flow and text that says 'Automate your team's manual tasks, so they can focus on the work that matters. Explore templates to get started.' Below this text are three options: 'Create automation', 'Manage automations', and 'Audit log'. The bottom of the screen shows a Windows taskbar with various application icons and a system clock indicating 10:01 on 26-09-2025.

2. Go to **Space settings**.
3. Select **Automation**.

The screenshot shows the 'Space settings' page for 'TeamOrbit' in Jira. The left sidebar lists various settings categories, with 'Automation' selected. The main area is titled 'Example flow' and contains a section 'Let's create your first flow'. This section explains that flows allow automating repetitive tasks and are made by combining different steps. It lists four steps: 'Add a trigger', 'Add a condition', 'Add a branch', and 'Add an action'. At the bottom of this section are two buttons: 'Skip tour' and 'Next'. The bottom of the screen shows a Windows taskbar with various application icons and a system clock indicating 10:02 on 26-09-2025.

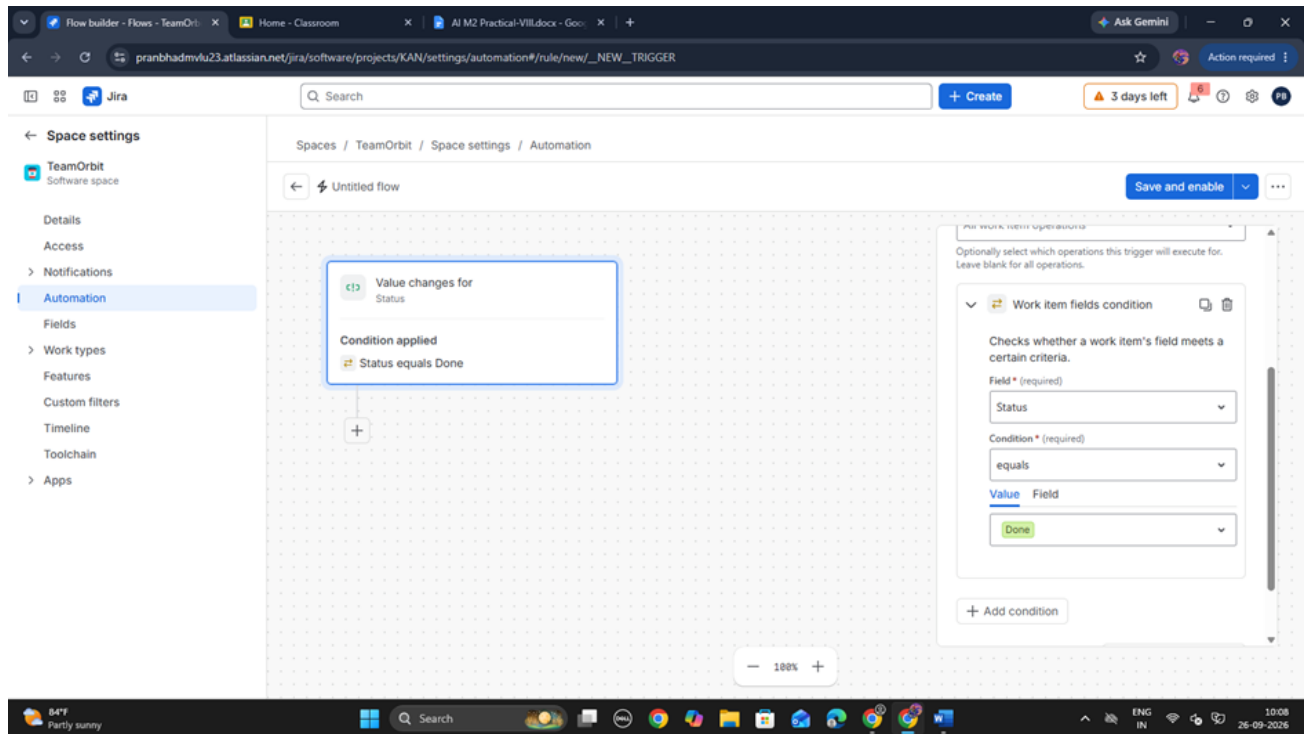

4. Click **Create automation**.

The screenshot shows the Jira Automation interface for a space named 'TeamOrbit'. The left sidebar contains a menu with options: Details, Access, Notifications, Automation (selected), Fields, Work types, Features, Custom filters, Timeline, Toolchain, and Apps. The main area displays an 'Example flow' with three steps: 1. 'Work item created' (Flow is run when a work item is created.), 2. 'If issue is unassigned' (If issue is unassigned), and 3. 'Add comment to work item' (Did you forget to assign the work item?). On the right, there is a 'Navigating a flow' section with instructions on how to use the flow builder and a 'Get started' button. The top navigation bar includes a search bar, a '+ Create' button, and a '3 days left' notification. The bottom status bar shows the weather as '64°F Partly sunny' and the time as '10:03 26-09-2026'.

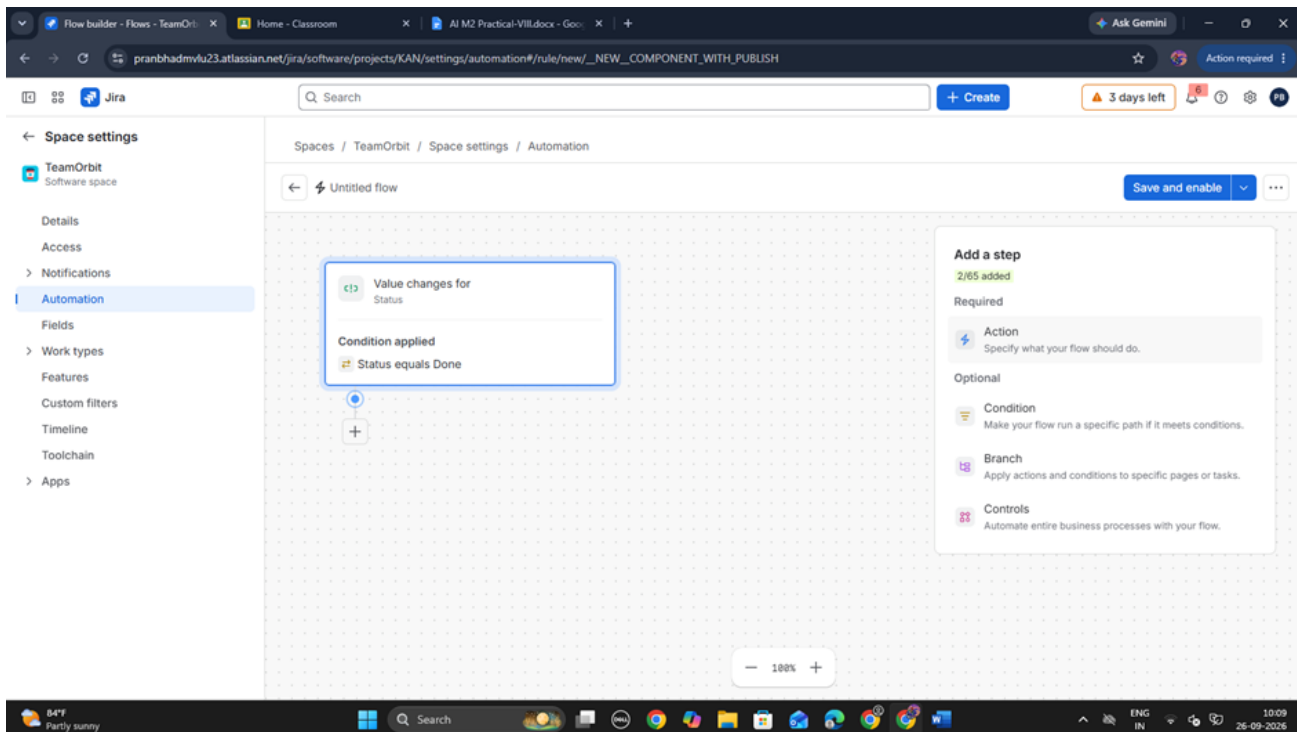

5. Select a trigger such as **Work item transitioned**.

The screenshot shows the Jira Automation interface for a space named 'TeamOrbit'. The left sidebar contains a menu with options: Details, Access, Notifications, Automation (selected), Fields, Work types, Features, Custom filters, Timeline, Toolchain, and Apps. The main area displays an 'Untitled flow' configuration. A trigger block is added to the flow canvas, labeled 'Value changes for Status'. The right sidebar shows the configuration for the 'Field value changed' trigger. It includes a dropdown for 'Status', a dropdown for 'Change type' set to 'Any changes to the field value', and a dropdown for 'For' set to 'All work item operations'. There are buttons for 'Add condition', 'Back', and 'Next'. The bottom status bar shows the weather as '64°F Partly sunny' and the time as '10:07 26-09-2026'.

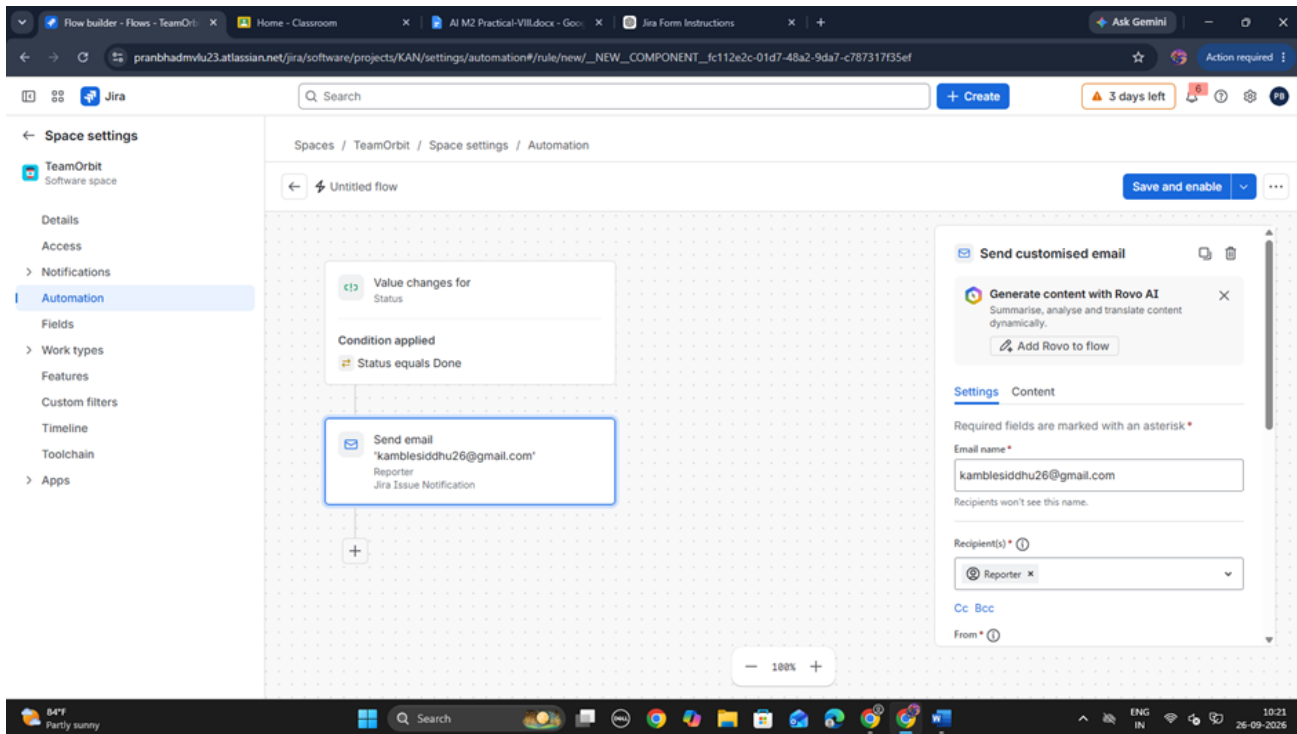

6. Set the transition/status to **Done**.
7. Add a **Condition**.
8. Select the required condition.

9. Add an **Action**.

10. Select **Send email** or **Assign work item**.
11. Configure the action.
12. Save the rule.

Result

An automation rule was successfully created.

Practical 11-C: Test and Enable Automation Rule

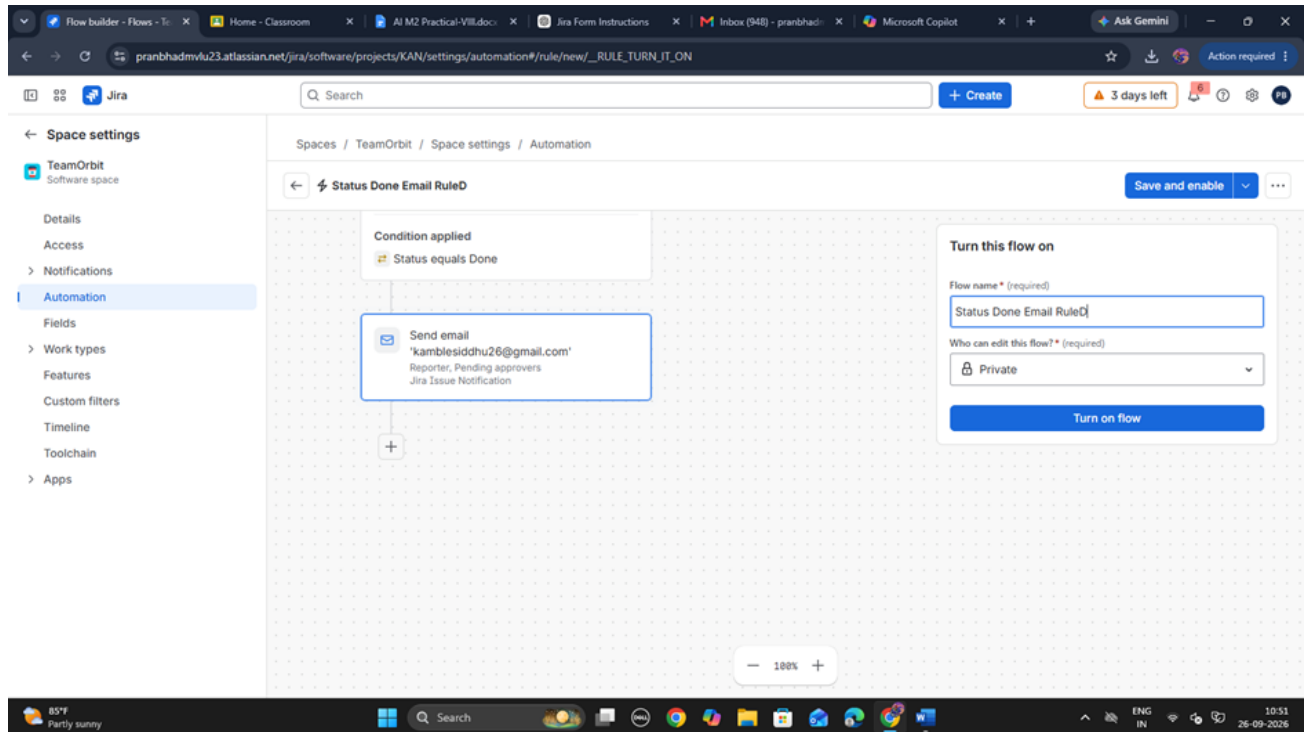

Objective

To test and enable the created Jira automation rule and verify that an email is sent when the task is completed.

Steps

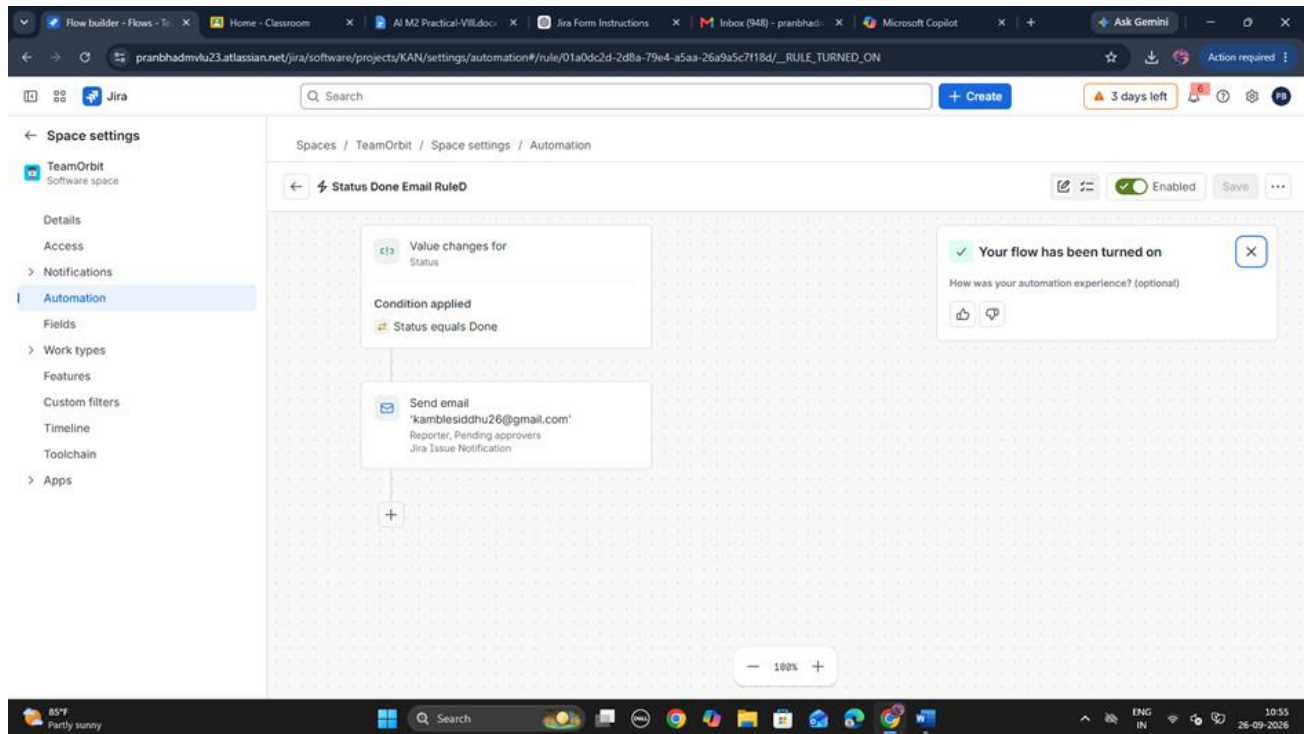

1. Open the **ScrumOrbit** project.
2. Go to **Space settings**.
3. Select **Automation**.
4. Open the automation rule created in **Practical 11-A and 11-B**.
5. Check that the automation rule contains:
 - **Trigger:** Field Value Changed
 - **Field:** Status

- **Condition:** Status equals Done
 - **Action:** Send email
6. Click **Turn on flow**.
 7. Enter the **Flow name**:

Status Done

8. Click the **Turn on flow** button.
9. Verify that the automation rule is now **enabled/active**.
10. Go back to the Jira work item/task.
11. Complete the task by changing its **Status to Done**.

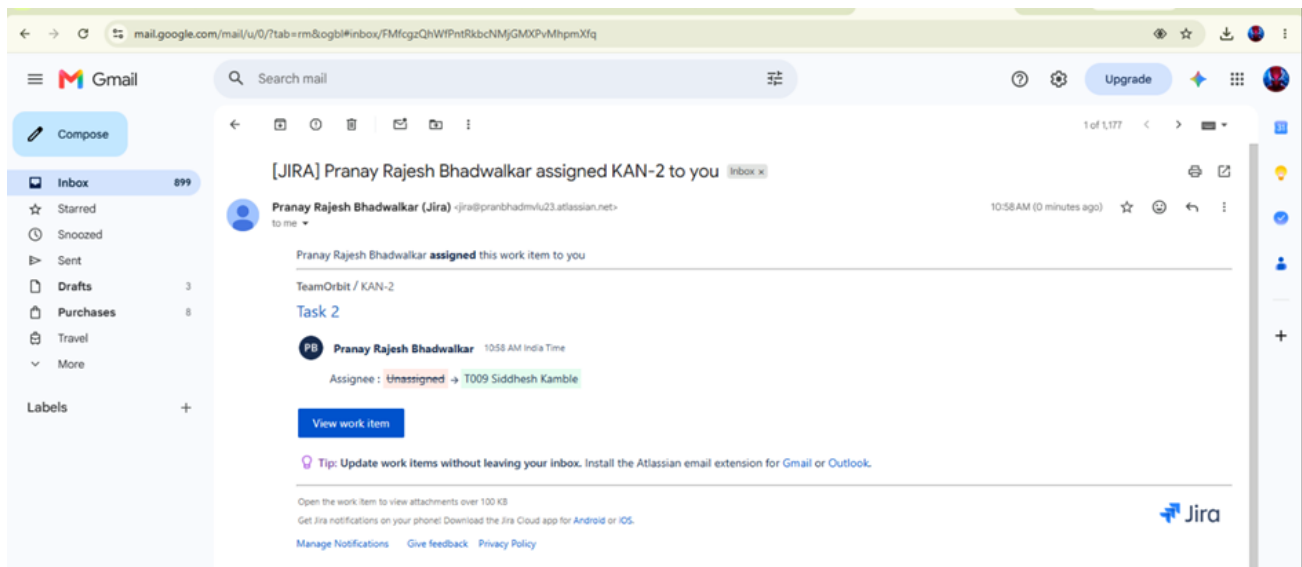

12.Wait for the automation to execute.

13.Open the configured **Gmail/email account**.

14.Check the **Inbox** for the automation email.

15.Verify that the email has been **sent and received** after the task is completed.

Result

The automation rule was successfully enabled and tested. When the task was completed, the email was automatically sent and received.
